Remediation of the Prairie Creek Mine Site

My questions are for the Minister of Lands.

Regarding the Prairie Creek Mine site and its ultimate environmental remediation and abandonment, what would it cost to remediate the entire site to current standards, and:

1. Is there an approved plan to carry out this work?
2. What is current amount and form of financial instrument held as financial security for the Prairie Creek site remediation?
3. Does Canadian Zinc have the financial capacity to conduct a full remediation on the basis of its current worth?
4. What is the plan to close any shortfall between the currently held financial security and the site environmental liability to ensure there are no public liabilities?
